FOR IMMEDIATE RELEASE

RACS Announces Enhanced Sanitation

RACS is proud to announce the launch of its innovative animal flooring, now featuring robust antimicrobial protection. This groundbreaking advancement is designed to significantly enhance sanitation and reduce the risk of disease within swine facilities.

Innovative Antimicrobial Protection

The new RACS flooring incorporates a new technology of Plastisol, a material that has been rigorously tested and proven to inhibit the activity of harmful bacteria such as Escherichia coli and Salmonella enteritidis by 99.99%. This built-in antimicrobial protection ensures that animal caretakers can maintain higher levels of cleanliness and hygiene using their standard cleaning practices. This built-in protection is not an antibiotic, but an antimicrobial, which is much different. Antimicrobials inhibit the growth of microorganisms. RACS flooring has antimicrobial protection and is antibiotic-free.

Enhanced Sanitation

With the inclusion of antimicrobial properties, RACS flooring sets a new standard in the industry. As the only flooring manufacturer to offer sanitation at the microbial level, RACS provides customers with an effective solution to reduce disease risks and promote a healthier animal environment.

Benefits at a Glance

• Unmatched Antimicrobial Protection: Inhibits E. coli and Salmonella by 99.99%.
• Improved Sanitation: Enhances effectiveness of regular cleaning practices.
• Industry-First Innovation: The only animal flooring with built-in microbial-level protection.

Availability

RACS customers can now benefit from this advanced antimicrobial flooring. For more information or to place an order, please reach out to our sales team.
